

## **ATTACHMENT 5 – Hospital Capabilities**

1. The Transportation Group Supervisor should initially assign patients to hospitals using this guide.
2. Send minimal patients to any hospital.

Type of Hospital	Immediate Patients	Delayed Patients
Level I Trauma Center	10	15
Level III Trauma Center	5	5
Non-Trauma Center	3	5

3. Base Station must be made aware of these initial transports as soon as possible to allow for appropriate hospital notification.
4. As the incident progresses, the Transportation Group Supervisor uses reports of hospital status as a guide to determine how many additional patients each hospital should be assigned.
5. In the absence of other information, the above table represents the number of patients each hospital can receive each hour.
