

Infants and Children in Cardiac Arrest

Inclusion criteria: 1 month old to 7 years old

*****KEY POINT*****

• This age of patient has a high likelihood of airway obstruction — Cardiac Arrest in pediatrics should be considered to be Respiratory in nature until proven otherwise

• Pediatric pads should be used with pediatric patients if available

• If emesis is present, suction immediately

Note: Lifepack 15 AED mode is not intended for use on patients <8 years old.
