

8.04 PEDIATRIC DYSRHYTHMIA: TACHYCARDIA

BLS Treatment
<ul style="list-style-type: none"> • Position of comfort. • NPO • Assess circulation, airway, breathing, and responsiveness. • Oxygen as indicated. • Provide Spinal Motion Restriction as indicated or position of comfort as indicated. • Appropriately splint suspected fractures/instability as indicated. • Bandage wounds/control bleeding as indicated.
ALS Treatment – All Tachycardias
<p>Current American Heart Association Guidelines concerning Emergency Cardiac Care assessments and interventions shall always take precedence over local protocols when there is a conflict concerning techniques of resuscitation.</p>
<ul style="list-style-type: none"> • Advanced airway if indicated. • IV with Normal Saline TKO, preferably at antecubital fossa. • If unstable, IO after 1 min of IV attempts.
ALS Treatment – Specific Tachycardias
SINUS TACHYCARDIA (NARROW QRS)
<ul style="list-style-type: none"> • Search for and treat underlying cause. • IV or IO with Normal Saline fluid bolus.
SUPRAVENTRICULAR TACHYCARDIA WITH PULSE and ADEQUATE PERFUSION (NARROW QRS)
<ul style="list-style-type: none"> • Consider vagal maneuvers. • Adenosine
SUPRAVENTRICULAR TACHYCARDIA WITH PULSE and POOR PERFUSION (NARROW QRS)
<ul style="list-style-type: none"> • IV/ IO Normal Saline fluid bolus. • Adenosine • If IV/IO unavailable, synchronized cardioversion. • Pre-sedate with Midazolam if possible; DO NOT delay cardioversion.
VENTRICULAR TACHYCARDIA WITH PULSE and ADEQUATE PERFUSION (WIDE QRS)
<ul style="list-style-type: none"> • Consider vagal maneuvers. • Amiodarone
VENTRICULAR TACHYCARDIA WITH PULSE and POOR PERFUSION (WIDE QRS)
<ul style="list-style-type: none"> • IV or IO with Normal Saline. • Synchronized Cardioversion • If responsive to pain, sedate before cardioversion with Midazolam.
