

CALCIUM CHLORIDE (CaCl)

ACTION: Electrolyte

- Increases calcium levels necessary for cardiac contractility.
- Stabilizes the myocardium in hyperkalemia or hypocalcemia associated cardiac arrhythmias.

INDICATIONS:

- Hyperkalemia.
- Hypocalcemia with tetany.
- Calcium channel blocker overdose/toxicity.
- Hypermagnesemia.

CONTRAINDICATIONS:

- Use with extreme caution in patients taking digitalis compounds.

POTENTIAL SIDE EFFECTS:

- Bradycardia and asystole.
- V-Fib.
- Hypotension.
- Nausea and vomiting.

ADULT DOSE/ROUTE:

⇒ **Hyperkalemia and calcium channel blocker overdose:** 500 mg – 1,000 mg (1 gm) IVP or IO over 5 min. May repeat in 10 min.

PEDIATRIC DOSE/ROUTE:

⇒ 20 mg/kg IVP or IO over 5 min.

NOTES:

- Ensure that you have patent IV line as calcium extravasation will cause tissue necrosis.
- Calcium precipitates in IV bag or tubing if mixed with sodium bicarbonate.

*Effective: 11/01/17
Supersedes: 03/01/15*
